90 90 90 HIV/AIDS STRATEGY ← *Britannic Bold, 18, centre align, u/c*

Fully Justify

The 90 90 90 HIV/AIDS strategy is a concept introduced in 2013 by the United Nation's programme on HIV/AIDS. The strategy is yet another attempt at getting the HIV epidemic under control while experts continue the search for a long-lasting solution. The main purpose with the strategy is to identify people early in their infection. This will ensure that they immediately start treatment. It is envisaged that early treatment will prevent transmission of the virus. This will in turn have an impact on HIV incidence at a population level across the world. The strategy is presented as follows:

First 90	Second 90	Third 90
To diagnose 90% of all HIV positive persons – through testing people everywhere, churches, schools, colleges, universities, clinics, hospitals.	To provide antiretroviral therapy (ART) for 90% of those diagnosed – by providing all those who tested with treatment.	To achieve viral suppression for 90% those treated by the year 2020 – receiving treatment will mean that the virus is not be cured but suppressed.
